

EVERY MINUTE. EVERY HOUR. EVERY DAY. WE CARE.

A home remote monitoring system designed to improve the quality of life of your patients and carers.

Health providers around the world are discovering the advantages of remote patient monitoring systems like Telehealth, a simple to use system for remote monitoring of patient vital signs. It can be installed in a patient's home or in a central location for multiple users, such as a residential facility or community health centre.

Revolutionising patient care around the world.

Telehealth saves time and money by reducing the need for face to face care. It helps in reducing hospital admissions by facilitating prompt medical intervention before a patient's condition deteriorates.

Evidence based research demonstrates

- Patient's condition can be monitored in the comfort of their own home
- Improves patient's independence by actively involving them in their care
- Increases patient's sense of medical security
- Allows for early medical intervention if required
- Reduces stress on medical resources through:
 - Reduced hospital admissions
 - Shorter stays for those requiring admission
 - Fewer emergency department visits

How does it work?

The patient is trained to use the equipment and measure a range of vital signs including, but not limited to:

- Blood pressure
- Oxygen saturation levels
- Weight
- ECG (single lead)
- Heart rate
- Blood glucose levels
- Quality of life measures

The readings are transmitted to a secure web based collection point where they are reviewed by a health professional and interventions are then introduced as and when required.

Developed by Docobo, a UK Telehealth organisation, it is a completely flexible service and can be designed and structured to suit your organisation's particular needs.

Silver Chain has over two years experience in Telehealth operations and research, and actively promotes collaboration to improve the community's capacity.

TeleCare Solutions CareLink Personal Alarms

Peace of mind for you and your clients,
24 hours a day.

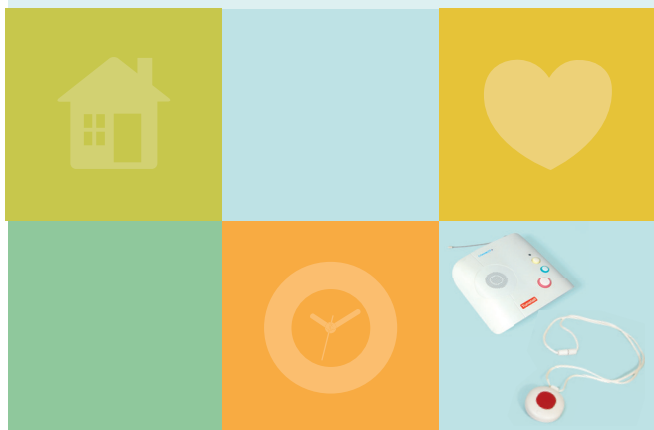

CareLink Personal Alarms are a convenient, simple to use and cost-efficient way of providing peace of mind for you and your clients, 24 hours a day.

The alarm is a small water resistant pendant that can be worn up to 80 metres away from the alarm unit.

Help is only the press of a button away.

When in need your client simply presses their pendant and a signal is sent to our monitoring centre where a trained operator will answer the call 24 hours a day, 7 days a week. The operator speaks to your client through the alarm intercom and contacts either the person(s) nominated, or an emergency service to attend and stays on the line with your client until help arrives.

TeleCare Solutions Assistive Technology Sensors

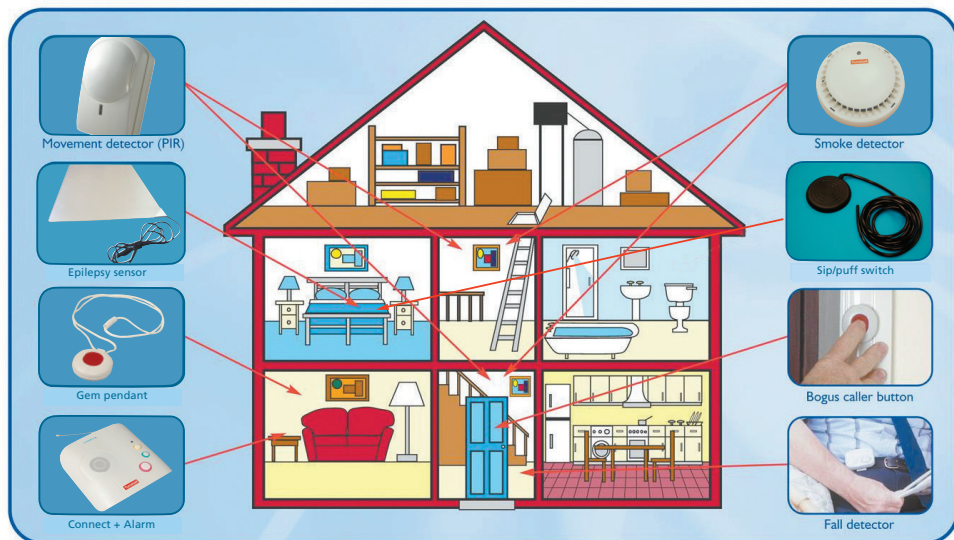

EVERY MINUTE. EVERY HOUR. EVERY DAY. WE CARE.

Allow your clients to continue
living independently.

In conjunction with the CareLink Personal Alarm, Silver Chain has a range of assistive technology sensors which also trigger the alarm.

Packages to detect falls and seizures are available, as well as other sensors such as smoke detectors, flood sensors or intruder "panic" alerts. We also have packages to assist wheelchair bound clients and those with dementia.
