

EVERY MINUTE. EVERY HOUR. EVERY DAY. WE CARE.

Peace of mind for your clients 24 hours a day

The CareLink Personal Alarm is suitable for people living alone, people with disabilities and/or ongoing medical conditions, or anyone who is concerned about their personal safety in the home.

Help is only the press of a button away

Available throughout Australia, the alarm is a small water resistant pendant that can be worn up to 80 metres away from the alarm unit.

With just one touch of a button a signal is sent to our monitoring centre where a trained operator will answer the call 24 hours a day, seven days a week.

The operator will speak to your client through the alarm intercom and then contact either the person(s) they have nominated, or an emergency service to attend to the call for assistance.

KeySafe

We also offer a KeySafe product which allows your clients to securely store keys outside their homes, allowing safe entry for family members, aides or if necessary emergency services.

The operator stays on the line until help arrives!

- **Peace of mind for your clients, 24 hours a day**
- **Provides duty of care to you and your clients**
- **Light and easy to use**
- **Water resistant**
- **System can be tailored to suit your needs**

EVERY MINUTE. EVERY HOUR. EVERY DAY. WE CARE.

Peace of mind for your clients 24 hours a day

Silver Chain has a range of TeleCare sensors available that also trigger the CareLink Personal Alarm.

Packages to detect falls and seizures are available, as well as other sensors such as smoke detectors, bed/chair occupancy sensors and intruder "panic" alerts.

We also have a selection of products to assist wheelchair bound clients and those with dementia.

TeleCare Solutions provide an improved quality of life by allowing your clients to continue living independently.

Fall Detector

Worn on the belt or clothing, the two stage detection process will activate the alarm during a fall. Alternatively, you can activate the alarm manually by pressing the button.

Property Exit Sensor

Provides real time alerts when someone has walked out of a house and not returned, or simply left the door open.

Smoke Detector

Emits loud beeping when smoke is detected at the same time as triggering an alarm call

Bed Occupancy Sensor

Detects pressure and can be programmed for differing time periods. Enables monitoring of activity or inactivity in the bed.

Puff Sip Switch

Designed for clients with limited or no use of their hands. The alarm activates by blowing or sipping on the tube.

Intruder "Panic" Button

Can be mounted anywhere within the home or office and will trigger a silent alarm call when activated.
