

RDNS Alarms

Gem4 GPS pendant

The Gem4 allows you to live independently and gives your loved ones peace of mind, knowing there is someone to answer your call for help when you're out and about.

What is it?

The Gem4 is a wearable 4G device, designed to help the user raise a call for assistance when out and about. With a GPS locator, fall detector and two-way speaker, the Gem4 reduces the risk to an individual by quickly connecting them to our 24/7 monitoring centre and identifying their location so that assistance can reach them quickly.

How does it work?

The Gem4 can be worn around the neck and allows the user to trigger an alarm call to the 24/7 monitoring centre by firmly pressing the SOS button. The user will hear a voice confirming the activation and a trained and highly experienced operator will assist as required.

Upfront	
Gem4 alarm	\$250.00
Admin fee	\$55.00
Ongoing	
Monthly 24/7 monitoring fee	\$25.45
